BEL Reports on Intermittent Power Outages Experienced on Sunday

Belize Electricity Limited (BEL) experienced several intermittent power outages across the country yesterday.

A fault on the power system, caused the Mollejon Hydroelectric Facility to trip at 7:30 a.m. yesterday, which resulted in loss of power supply to the Central, Western and Southern Zones, and at 8:13 a.m., that fault caused the Comisión Federal de Electricidad system (CFE) system that feeds Belize to trip. This resulted in a loss of power supply to Northern Zone. Between 8:26 a.m. and 9:07 a.m. power supply was restored to all affected areas.

At 6:51 p.m. yesterday, a trip occurred on the distribution system along the Hummingbird Highway, which caused the power system in the Central, Western and Southern Zones to lose power supply and at 7:07 p.m. power supply was lost to the Northern Zone. Between 7:18 p.m. and 7:43 p.m. power was restored to all affected areas.

BEL apologizes for the inconvenience caused by these power outages.
