## **BEL Manages Power Restoration Following Major System Outage**

Belize Electricity Limited (BEL) hereby informs our Customers that we have restored power to most of our Customers countrywide after experiencing a major system outage at 1:52 p.m. on Friday, September 26, 2025. Several communities in the country were affected, except for Belmopan, portions of San Ignacio, Ladyville, and portions of rural Belize District, which remained with power throughout this event.

The outage occurred when we lost supply from Comisión Federal Electricidad (CFE), in Mexico. Preliminary reports indicate that they experienced a major outage on their system that affected the entire Yucatan Peninsula.

The current available in-country capacity is insufficient to meet the power requirements (demand) of our Customers.

BEL is, therefore, preparing to address the impacts of the resulting supply shortage. Starting at 5:00 p.m., load shedding will be implemented for various parts of the country to match the available energy supply with demand for power.

We thank you for your understanding and assure our Customers that we are making every effort to maintain safe, reliable, and sustainable energy supply to all service areas countrywide.
